

### BAG FILTERS

This stainless steel filter (SS304) is mounted on the return flow water process, whether the water is warm or ice cold. Combined with a cleaning product, it filters all **particles in suspension**.

This clarifier filter features:

- 2 highly efficient complementary systems that capture impurities responsible for stopping up radiators circuits and blocking drives:
  - o A stainless steel magnetic filter with its polypropylene filter bag
  - o A magnetic core of 1 to 4 bars that capture iron oxide particles and other suspended matter.
- Perfect sealing thanks to EPDM o-rings
- System with 3 adjustable feet with locking strap for easy positioning and safe use
- A simple and quick maintenance thanks to the special lid
- Optimized size and weight
- The following accessoires are part of the filter:
  - o 2-way adapter receiving :
    - Manometer for pressure control of the installation
    - Ball valve for degassing
